

Ecological Information

G 454 BUCASAN® SANIBREEZE

Water-dilutable sanitary cleaner

Ingredients: <5% anionic surfactants, <5% nonionic surfactants, <5% phosphonates, contains preservation agents and perfumes. Other ingredients: organic acids, water-soluble solvents, auxiliary agents, colouring.

Ecolabel	Percentage of readily biodegradable components according to OECD 301 or REGULATION on detergents	Theoretical oxygen demand	Phosphorus content (calculated as elemental phosphorus)
	93.9 %	180 mg / g	1.8 mg / g

Environmental impacts of the product are predominantly due to its content of surfactants, which are toxic to aquatic organisms. They are, however, largely degraded during the usual process time of sewage in treatment plants. Remnants eventually released into natural waters are immediately subject to further degradation processes and will soon disappear from the environment.
